

Appendix 29

COMPLETIONS FORECAST

- Canada-wide completions for 2016 are forecast to moderate slightly to 192,900 units. British Columbia and Quebec are forecast to have the largest increase in completions while declines are led by Alberta and, to a lesser degree, Ontario and Manitoba-Saskatchewan.
- Single-family completions for 2016 are expected recover most of the ground lost in 2015. Ontario, Quebec and B.C. are forecast to record higher single-family completions.
- Apartment completions for 2016 are forecast to ease only slightly from 2015's 37 year high. Quebec, B.C. and Atlantic Canada are expected to record higher apartment completions while Ontario (after a record year), Alberta and Manitoba-Saskatchewan are forecast to have lower completions.
- Total completions in Canada for 2017 are forecast to remain relatively unchanged from 2016.
- Single-family completions for 2017 are forecast to rise with all regions sharing in the increase. Apartment completions are expected to moderate further after 2 exceptionally strong years – all regions are forecast to record lower or stable apartment completions.
- These forecasts are based on known past starts and completions levels and the projection of housing starts in the Winter 2016 issue of Altus Group Housing Forecast.

Winter 2016

Total Housing Completions, Canada

2015 – 194,461 units

2016 – 192,900 units

2017 – 192,500 units
