Ottawa, Ontario K1A 0L8

Dear Mr. McNally:

RE: Certain Concrete Reinforcing Bar 1 / Rebar – RB1 / Reply of Gerdau Ameristeel Corporation to the Request for a Normal Value Review by Çolakoğlu Metalurji A.S.

On behalf of Gerdau Ameristeel Corporation (“Gerdau”), a Canadian producer of rebar, we are replying to the request by Çolakoğlu Metalurji A.S. (“Çolakoğlu”) that the CBSA initiate “a review of the normal values last issued to Çolakoğlu on 18 December 2018.”¹ Gerdau submits that the CBSA should not conduct a re-investigation at this time for the reasons set out below.

First, while Çolakoğlu claims that raw material prices have decreased between June 2018 and October 2020, by only presenting data to October 2020, Çolakoğlu’s data ignores the significant increase in raw material costs that have occurred in Turkey. On December 9, 2020, S&P Global Platts reported “Deepsea Turkish import scrap prices rose to their highest level since September 2014.”² The article further notes that “The {heavy melting scrap} index has risen over \$100/mt in just over two months, up from 282.25/mt CFR on Oct. 8, with both mill and recycler sources expecting \$400/mt CFR for premium HMS 1/2 (80:20) to be possible in the near-term.”³

Second, Çolakoğlu’s use of raw material costs converted to U.S. dollars masks the fact that costs of rebar production in Turkey have actually increased substantially between May 2018 and the present. Çolakoğlu provides no justification as to why the CBSA should analyze Turkish market

¹ Çolakoğlu Re-Investigation Request (4 December 2020).

² **Attachment 1**, S&P Global Platts, “Turkish import scrap prices hit 6-year high on firm demand” (9 December 2020).

Page 2

raw material costs in U.S. dollars as opposed to Turkish lira. For example, Çolakoğlu does not indicate whether it primarily sources scrap from domestic or import sources, which could serve as an explanation for expressing costs in a foreign currency. Given that the costs of production for Çolakoğlu in Turkey are likely to be incurred and expressed in Turkish lira, there is no basis to use U.S. dollar converted values to assess the changes in the costs of production in Turkey.

When the values are expressed in Turkish lira, the data show that costs have not been “declining steadily”⁴ as claimed by Çolakoğlu but rather have increased significantly since May 2018 – the last month of the POI for the most recent normal value review covering subject goods exported by Çolakoğlu.⁵ As **Attachment 2** shows, the average price of scrap in Turkey in May 2018 was [] lira per tonne.⁶ Between May 2018 and November 2020, scrap increased [] percent to [] lira per tonne. Thus, contrary to Çolakoğlu’s claim, raw material costs have increased substantially since the last normal value review.

Third, Gerdau submits that CBSA resources are better spent conducting the new investigations on dumped rebar from Algeria, Egypt, Indonesia, Italy, Malaysia, Singapore, and Vietnam (“Rebar 3”) and from Oman and Russia (“Rebar 4”).⁷ The Rebar 3 and Rebar 4 investigations are subject to tight statutory deadlines while normal value re-investigations such as the one requested by Çolakoğlu are discretionary. As noted in the Re-Investigation and Normal Value Review Policy, “resources available” is a consideration in deciding whether to grant a request to conduct a normal value review or re-investigation.⁸

⁴ Çolakoğlu Re-Investigation Request (4 December 2020) at 1.

⁵ Çolakoğlu Re-Investigation Request (4 December 2020) at 1 (“Çolakoğlu current prospective normal values are based on its sales and cost data for April and May 2018”).

Lastly, Çolakoğlu does have an alternative way to obtain normal values. To the extent that Çolakoğlu has an importer that is interested in purchasing product from Çolakoğlu, the importer can file a request for a re-determination in order to obtain normal values for the products.⁹

For the above reasons, therefore, Gerdau submits that the CBSA should reject Çolakoğlu's request and should not initiate a re-investigation.

Should you have any further questions regarding any of the above information, please do not hesitate to contact us.

Sincerely yours,

Andrew Lanouette

HIGHLIGHTS

Expectations grow for \$400/mt CFR in near-term

Mills enjoy healthy margins despite sharp scrap hike

London — Deepsea Turkish import scrap prices rose to their highest level since September 2014, amid strong finished steel orderbooks into Q1 2021.

S&P Global Platts assessed Turkish imports of premium heavy melting scrap 1/2 (80:20) at \$385/mt CFR on Dec. 9, up \$5/mt on day, to reach the index's highest level since Sept. 1, 2014, when the price was also at \$385/mt CFR.

The index has risen over \$100/mt in just over two months, up from \$282.25/mt CFR on Oct. 8, with both mill and recycler sources expecting \$400/mt CFR for premium HMS 1/2 (80:20) to be possible in the near-term.

Strong finished steel demand, mill margins

Turkish mills have experienced strong finished demand, especially for higher value products such as wire rod and hot-rolled coil, with some mill orderbooks stretching into March shipment dates. Rebar demand has also been firm, though not as strong as other products, with some mills well-booked into late February.

"I have not seen lead times as long as three months in the Turkish long product market for a long time," one Turkish trader said.

The demand from large-volume rebar bookings into Hong Kong and Singapore in October and early November were replaced by improved Turkish domestic demand and interest from Latin American buyers into December, as the rising finished steel prices reduced Turkish competitiveness into Southeast Asia.

Turkish mills were heard to have booked deepsea bulk scrap cargoes as far as two months ahead, with some mills beginning to book material for February 2021 arrival, even in late November.

The scrap price rally kicked off in early November as mills looked to secure scrap cargoes ahead of the usual slowdown in scrap collection in key exporting regions during the winter months. Concerns over a second wave of coronavirus lockdowns also prompted strong mill buying.

Positive news regarding the efficacy of multiple vaccine candidates against the coronavirus and certainty over the US presidential election also boosted market sentiment in November for early 2021.

Despite the sharp hike in scrap prices, Turkish mills have enjoyed healthy margins over the past month. The Turkish longs melting margin –the spread between Turkish export rebar and import scrap – was assessed at \$170/mt Dec. 9, unchanged on day.

The melting margin has remained firmly above mills' benchmark level of \$160/mt since Oct. 30 and reached an eight-month high of \$175/mt on Dec. 4. This has prompted expectations of higher workable levels for premium HMS 1/2 (80:20), with \$390/mt CFR considered workable in the near-term.

Scrap prices into Turkey also remain competitive against semi-finished steel alternatives for Turkish mills, such as CIS-origin billet, which was offered as high as \$535-\$540/mt CFR Turkey on Dec. 9.

TURKISH MILLS ARE ENJOYING A COMFORTABLE REBAR-SCRAP MARGIN DESPITE THE SHARP SCRAP PRICE INCREASE

US recyclers heard to hold back from Turkish market

During the sharp rally, no confirmed US-origin cargos were heard to be booked since Nov. 11, as US recyclers looked to hold back ahead of a sharp rise in domestic scrap prices.

This was realized in the US December scrap settlements, with Platts US shredded scrap index calculated at \$371.75/lt delivered Midwest Dec. 8, up from \$288.50/lt one month earlier on Nov. 13. Scrap price hikes were supported by a more-than \$400/st rise in US hot-rolled coil prices since August, with Platts TSI US hot-rolled coil index at \$856.50/st EXW Indiana Dec. 8.

Market sources noted that a number of confidential US-origin cargoes were likely to have been booked by Turkish mills during the past month, however.

The relative absence of US material into Turkey has also tightened shredded scrap supply. This has led some Turkish mills to pay elevated premiums of \$10-\$14/mt for shredded scrap above the HMS 1/2 (80:20) price for recent deepsea cargoes from UK, Benelux and Baltic suppliers, rather than the historic \$5/mt premium.

Rising collection costs

The sharp increase in CFR Turkey prices has also caused collection concerns for scrap exporters, as sub-suppliers push for higher prices.

Benelux exporters were heard to pay as high as Eur265-270/mt for HMS material delivered to the dock on Dec. 9, up from Eur210-215/mt delivered one month earlier, with some sell-side sources expecting prices to rise further in the near-term.

Sources noted that cargoes that are currently being loaded for December shipment were sold \$100/mt below today's CFR Turkey price, with recyclers needing to carefully manage their collection costs as sub-suppliers' expectations rise sharply in line with the CFR Turkey price.

"There is no fully accumulated and ready cargo available anywhere – everybody is gambling from now on, this is very clear," a Turkish agent source said, noting that some scrap recyclers were agreeing bulk cargo sales without having fully collected the material.

The near-term contango on the scrap forward curve on the London Metal Exchange strengthened further on week, driving futures traders' expectations for near-term physical prices to breach the \$400/mt CFR level, last seen in January 2014.

The LME December scrap futures contract increased by \$17/mt over the week to \$396/mt Dec. 9, while the January contract was assessed by Platts at \$417/mt Dec. 9, up a massive \$37.50/m on week.

Market sources also expect the reintroduction in early 2021 of ferrous scrap imports into China, the world's largest steelmaking nation, to add further upward pressure on CFR Turkey prices.
